

Summer Math Assignment for 2018-19 8th graders:

Choose ONE of these to do for this summer and be prepared to write a paragraph about it when you return in August (or write it when it happens and bring it in August):

1) Take on a new responsibility in your household.

This could be something you want to be doing already and aren't (making your bed, reading your bible each day ☺) or something new. Many of you already help in many ways! Consider how what you do this summer may prepare you to take more responsibility for your learning and organization next school year.

2) Play a new board game or outdoor activity with family or friends.

Consider if chance or choice are involved and what strategy you use to be successful. What problem solving strategies do you use that you might also use to solve a math problem?

3) Write a math word problem based on something you do this summer.

Examples might be: calculating miles per gallon on a trip, finding percent discount, calculating area or perimeter, scales/maps, fractions! Include the problem and the answer key with work shown. For your paragraph, I would love to hear how you chose this problem.

4) Log into mathspace and do some problems. Write about what topics you chose and why.

Have a great summer!! Mrs. Julian and Mr. Bruhn
