

Summer Math Assignment for 2019-20 8th graders

In preparation for your responsibilities (and privileges:) as 8th graders, complete the following:

1) Read the book of **Proverbs**. Pick out 2-5 pieces of King Solomon's wisdom that you can apply to help you be a more successful student next year. Write $\frac{1}{2}$ page on these things (giving chapters and verses) and how they impact your goals for next year.

Also, choose **ONE** of these (2A OR 2B) to do this summer and be prepared to write about it when you return in August (or write it when it happens and bring it in August):

2A) Take on a new responsibility in your household.

This could be something you want to be doing already and aren't (making your bed, mowing, helping with dishes or pets, reading your bible each day ☺ or something new. Many of you already help in many ways! Keep a log of what you do, when and how long it takes. Consider how what you do this summer may prepare you to take more responsibility for your learning and organization next school year and write a $\frac{1}{2}$ page about this.

OR

2B) Write a math word problem based on something you do this summer.

Examples might be: calculating miles per gallon on a trip, finding percent discount, calculating area or perimeter, scales/maps, fractions! Include the problem and the answer key with work shown. Write 2 paragraphs: one about why you chose this problem and one about how this math applies to other areas of life.

Looking forward to a great 8th grade year! Have a great summer!! Mrs. Julian and Mr. Bruhn
